Go **Stop**
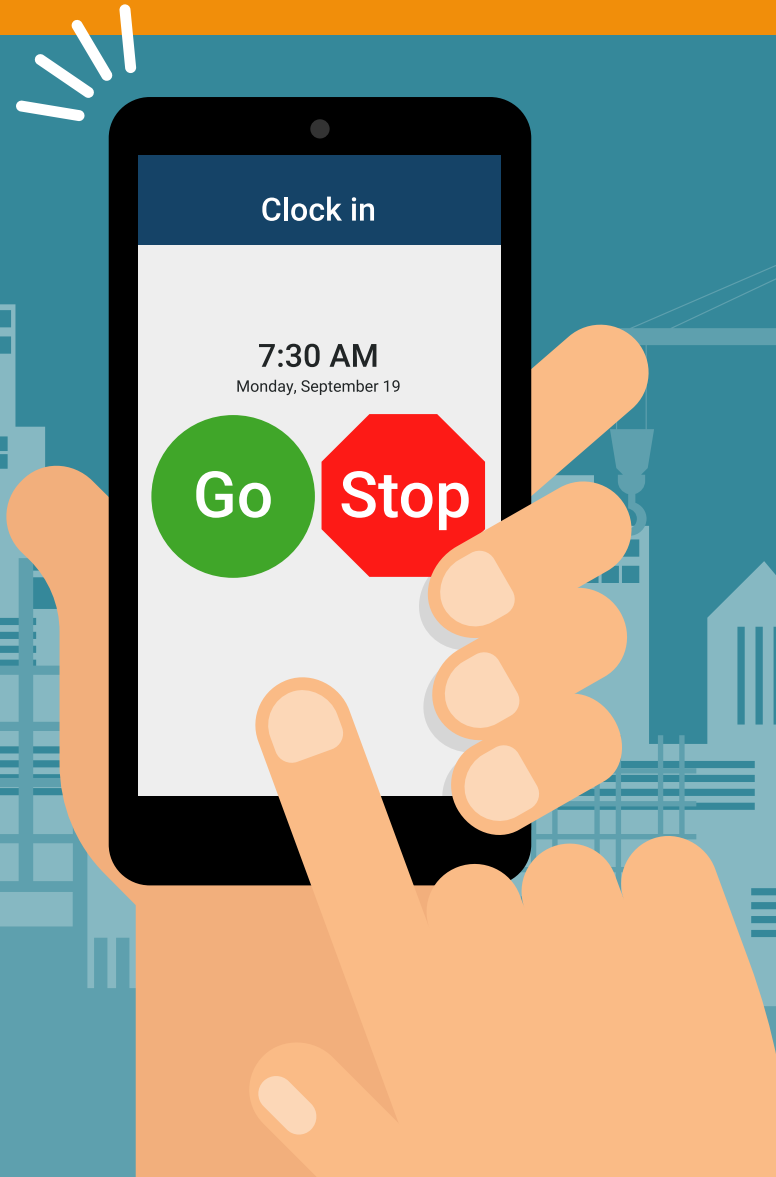

Just over 40%* of contractors use cloud-based technology for time tracking

But are they using the right solution?

All time tracking solutions aren't built the same...and some aren't even built for construction.

*AGC/Sage

ExakTime pioneered in-the-field time tracking, and we still lead the pack

There are other solutions out there that may look like ExakTime; but dig a little deeper and the differences become obvious. In fact, every month we implement lots of customers on ExakTime that tried and were ultimately disappointed by another solution.

Here are just three of the reasons construction companies and contractors trade up to ExakTime...

1. ExakTime was designed for construction so it works like a dream in the field and in the office.

2. Our US-based customer support team is responsive, prompt and knowledgeable.

3. The intuitive back-end is easy for office staff and owners to learn and navigate.

Let's take a closer look at each of these unique ExakTime advantages.

1. A construction-first approach means ease of use and field-worthy features

When you're out on the job site you don't have the time to mess around with apps that aren't easy to use. That's why we designed ExakTime to be simple and intuitive.

It works so well that others copy our innovations. Case in point: The green (clock-in) and red (clock-out) layout we originated is now industry standard.

But there's more to ExakTime than our clock-in/clock-out interface. Behind the scenes are rich construction-specific features like **FaceFront** for photo ID capture, **GPS tracking and Geofencing.**

You can even schedule worker shifts, input field notes and track equipment through the app.

(And if a mobile app doesn't work for certain job sites or employees ExakTime has options. We offer **rugged time clocks** and kiosk functionality. Or, the crew lead or supervisor can simply sign people or crews in an out on the app.)

ExakTime is strongly embedded in the construction landscape. We are constantly talking to our customers about what they need and want so we can enhance our product. We have our finger on the pulse of the industry with active relationships with numerous construction associations. And no one has a stronger **partner** ecosystem to ensure our customers get the advantages of solid, proven integrations that makes their lives easier.
2. Timely, responsive customer support when you need it.

Even when a solution is easy and intuitive, customers can still have questions.

That's why we offer an **award-winning** support team. Our knowledgeable problem-solvers are based in the US, so they're available to help when you need them.

ExakTime's approach to customer support is multi-tiered. It starts with **Support Central,** our online self-service help center that offers information on everything from getting started with ExakTime to running reports.

If a customer can't find what they need or they want more assistance they can chat with a support person, submit a support request and even get help through remote log-in.

3. You don't need to be a techie to run the business end of ExakTime

Sure it's easy for employees to accurately enter their time in ExakTime. But what about the supervisors and crew leaders who review and approve time? Or the office staff that needs to run payroll each week?

With ExakTime you get an easy-to-use, intuitive dashboard that helps you manage your business.

Easily export hours for payroll or take advantage of our integrations with the most popular construction payroll solutions.

Plus there are over 40 built-in reports that will help you better understand your labor spend.

Don't spend weeks learning a new system. ExakTime customers tell us it's easy to get started and they can effectively use the system in about a day.

And if you're coming from another web-based solution you'll get ramped up faster and appreciate how much easier ExakTime is.
Better cloud-based time tracking... plus a whole lot more

Construction and contracting companies have choices when it comes to how to track employees' time in the field. Since 1999, when ExakTime was developed by a contractor looking for a better, more accurate way to have employees clock in and out, other solutions have sprung up.

Some are good; others are so-so. But even the best of them doesn't offer the laser focus on the functionality and features that work best for the construction industry that ExakTime does.

Our sole mission is offering and improving a product that meets the needs of the industry.

It's why over 10 thousand companies use ExakTime, and over 1 million construction workers log in every day using one of our time tracking solutions.

"We can see where we're at within our budgets with ExakTime's reports."
Latite Roofing

Switching to ExakTime is easy

If you're currently use another web-based time tracking solution, trading up to ExakTime is simple…and it's quick.

Most companies take just a single payroll cycle—one week—to make the change, and our implementation experts are here to help.

Don't struggle through one more payroll with a solution that wasn't designed for construction, doesn't offer you support when you need it and isn't easy to use. Trade up to ExakTime.
