

Time is money. Save both with ExakTime.

When you pay your construction or field-based workforce an hourly wage, even a few minutes here and there can really erode your bottom line.

That's why using a web-based time tracking system instead of paper timecards can more than pay for itself just in the first month.

When employees clock in and out using a mobile app or on-location rugged time clock, you pay everyone accurately. No mistakes, no padding, no innocent errors.

Here's a quick example.

Say you pay Bob \$25 hour;
that's 42 cents per minute.

Bob doesn't always remember exactly when he came in and left, so his timecard is off by 20 minutes a day.

Here's why that's not chump change.

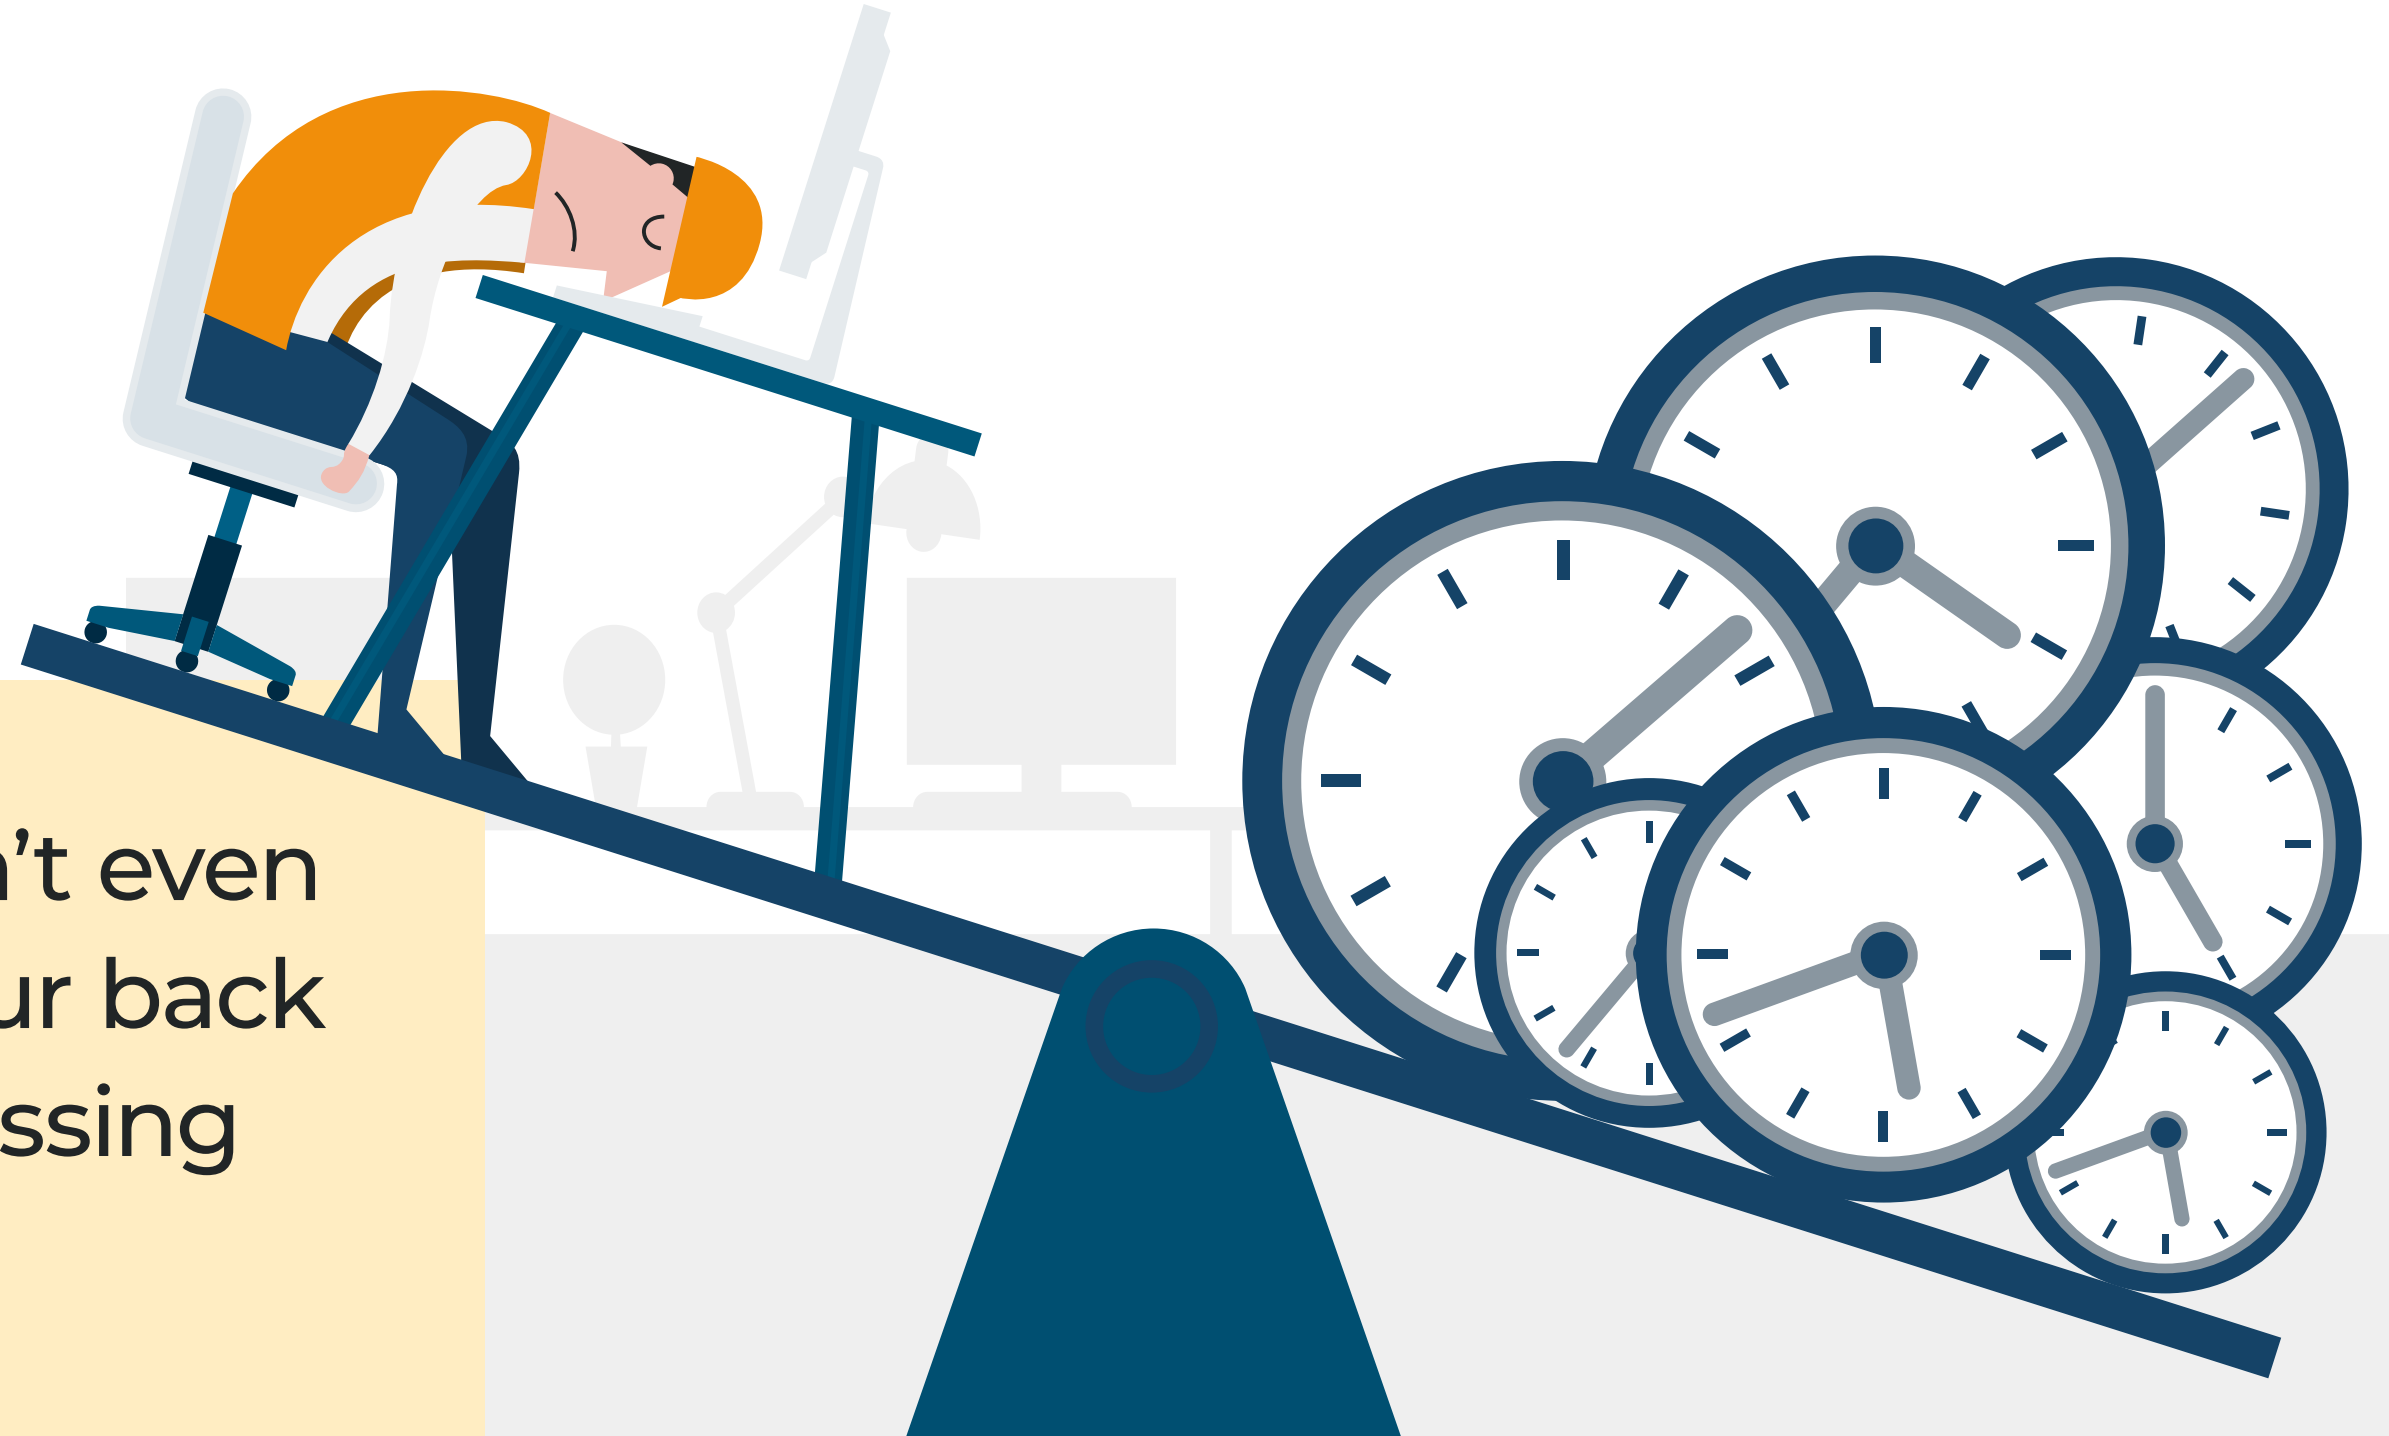

20 minutes @.42=\$8.40 day

That's \$42 every week, \$168 a month
and a whopping \$2,016 each year.

And Bob isn't your only employee. Anyone off by even 10 minutes a day is costing you over \$1000 annually.

Those numbers don't even include the time your back office spends processing paper timecards.

At less than \$10 per employee per month, investing in ExakTime is a smart business move. For many customers, it more than pays for itself almost immediately.

Don't keep paying for time employees aren't working. Speak with an expert about how you can save time and money with the construction and field industry's trusted time tracking solution.
